DIGITAL LITERACY

NAME : MANUSHRI GUPTA

REGISTRATION NO. : 25BAI11543

VITYARTHI FLIPPED COURSE

TASK 1

DIGITAL LITERACY AWARENESS INFOGRAPHIC

- I used Canva to create a one page 'Digital Literacy' Infographic to help with this task. I used this to identify what digital literacy is, tools usefully for students and communications to use professionally online.

- In order to explain what digital literacy was I used this design to show that it is more than just using the different tools that I have included such as Google Docs, Canva and GitHub but that it is about using these tools in a responsible, safe and effective way to improve productivity and creativity. I also covered using email polite and how to look after your digital footprint.

- As I was designing the infographic I enjoyed see things laid out simply yet interesting. what I found most difficult was finding the right extent of designing and making a balance between the amount of writing and images so that it was both interesting but still contained legible content and design.

TASK 2
STUDENT DIGITAL PORTFOLIO

- I also built up my digital identity which includes my GitHub, LinkedIn and Kaggle accounts. They are the important tools for promoting and presenting one's work, interaction and communication with others.

- I found GitHub an effective platform for uploading and working on coding, specifically as a helpful interface for collaboration with other people working on similar projects as well. On LinkedIn I added my profile page to essentially construct an online resume, and my interests include Artificial Intelligence and Machine Learning. I edited my details regarding my education and will use it to apply for internships and network. On Kaggle I will be able to train myself on data sciences and compete in competitions to train my analytical capabilities.

- In the coming years, I will update my GitHub frequently with projects I worked on, keep an active profile on LinkedIn and compete in Kaggle challenges. It will prepare me for applying for internships and for future job searches.

TASK 3
CODING & COLLABORATION PLATFORMS

- For this task, I looked into different types of coding and collaboration platforms, and went on HackerRank and Google Forms.

- I practiced beginner level python questions on HackerRank. This helped me develop my problem solving skills and learn about various basic concepts in python. Regular practice at these type of online coding tests helps students develop logical skills required to succeed in technical interviews.

- To collaborate, I put together a Google Form that was a Digital Literacy Awareness Quiz. It was made up of multiple choice and short-answer questions to see what I already knew about being smart online, using email properly, and using various digital tools.

- These tools are extremely beneficial academically. Coding websites to better technical skills. Google forms were used for surveys, quizzes, and data collection. I will continue to use these platforms in future to improve my technical and communication skills.

TASK 4

PROFESSIONAL EMAIL & ETIQUETTE GUIDE

✉️ Email 1: Extension Request

Subject: Request for Extension on Assignment Submission

Dear Professor,

I hope you are doing well.

I am writing to request a short extension for submitting my assignment due to some unavoidable circumstances. I was unable to complete the work on time, but I am committed to submitting quality work.

I kindly request an extension of two days to complete and submit the assignment.

Thank you for your understanding.

Yours sincerely,

Saumya Dixit

✉️ Email 2: Internship Inquiry

Subject: Application for Summer Internship

Dear Sir/Madam,

I hope this message finds you well.

I am a B.Tech student specializing in Artificial Intelligence and Machine Learning, and I would like to express my interest in a summer internship opportunity at your organization.

I am eager to gain practical experience and apply my skills in a real-world environment. I would appreciate any information regarding available opportunities.

Thank you for your time and consideration.

Yours sincerely,

Saumya Dixit

📱 Social Media Do's & Don'ts

✔️ Do's

Think before posting

Use respectful language

Verify information

Maintain privacy settings

Build a positive digital profile

❌ Don'ts

Don't share personal details publicly

Avoid offensive content

Don't spread fake news

Avoid online arguments

Don't misuse others' content

- ❖ A one time a student upload a message on facebook to complain that they dislike the work division in their project group, instead of to complain and communicate with their group team members face to face. This behavior led to miscomprehension with conflict.
- ❖ This could have been resolved for the student through communication. The student should have discussed the issue with the team in private. Posting on the internet causes feelings of misunderstanding and sometimes unwanted conflicts. This points to the significance of careful digital conversation.

TASK 5

CYBERCRIME AWARENESS CASE STUDY

PART A

- Phishing: This is a cybercrime in which hacker attract users by sending certain email or message or website which looks legitimate to disclose crucial details like password, bank account details, OTP etc.
- In a regular phishing attack, a user is targeted with a phone call or email, supposedly from a trusted person or institution such as a bank or web service. The communication will typically be time sensitive, prompting the user to follow a link in a message to either 'check' their account, or in order to claim a special prize. When the user follows a link, they are taken to a fake site pretending to be the real one, capturing any entered details.

- College students make up a large number of victims because they make online transactions frequently and lack knowledge. They may suffer from loss of money, uncovering their identity information.

- Safeguard from phishing by not opening unknown links, authenticating sources, and not disclose sensitive information while on the internet. Awareness and vigilance can be the best defense.

PART B

🛡️ Prevention Checklist

❖ Never share OTP or passwords
❖ Check website URLs carefully
❖ Avoid suspicious links
❖ Enable two-factor authentication
❖ Use strong passwords
❖ Avoid public Wi-Fi for transactions
❖ Be careful with UPI requests
❖ Install apps only from trusted sources

REFLECTION

Came across cybercrime research that made me realized that how widespread phishing attacks are and how easily someone can be scammed. Even innocent clicking onto unknown links can be unfortunate.

This activity has helped me to become more conscious of the dangers of being safe on the internet. I will check all my links and messages to prevent any accidents happening and avoid giving out any information unless I am certain of who I‘m giving it to.

In general, it has made me to be more responsible and careful at the usage of internet.
